

GLOBAL DIVERSIFIED ALPHA - PRO FORMA

KEY HIGHLIGHTS

- Reduces volatility, beta, and drawdowns versus long-only equity while participating in equity market performance in bull markets.
- Achieves equity outperformance in a bear market and outperformance during a crisis ("crisis alpha").
- Minimizes downside movements.
- Combining long equities (passive) with systematic equity, volatility- and global defensive systematic equity market neutral strategies.
- Improves convexity and yields to better overall risk diversification.
- Allows adding to existing (long-only) equity exposure, but without taking on entire equity risk.
- Active management of the portfolio through systematic quarterly readjustments of portfolio allocations.

STRATEGY DESCRIPTION

The Global Diversified Alpha investment program is a systematic, liquid, risk-controlled investment strategy. The strategy combines passive and active building blocks to make the equity market a better investment. This approach allows investors to benefit from falling and rising equity markets while reducing and better controlling risk.

RML Advisory's directors, advisors, and employees are hereinafter jointly referred to as the Company. The document is based on information obtained from sources believed to be reliable but is not guaranteed to be accurate, exact, complete, appropriate, or up to date. The Companies' opinions and estimates constitute the Company's judgment and should be regarded as indicative, preliminary, and for illustrative purposes only.

The performance information presented in this document, including charts and tables, includes back-tested performance. Back-tested performance is hypothetical (it does not reflect trading in actual accounts) and is provided for informational purposes only to indicate historical performance had the strategies been available over the periods noted. Back-tested performance shown is not an indicator of actual future results. The results reflect the performance of portfolios not historically offered to investors and do not represent returns that any investor attained. Back-tested results are calculated by the retroactive application of portfolios constructed based on historical data provided and assumptions integral to portfolio construction principles, which may or may not be testable and are subject to losses. Investors may get back less than their investment. The price and value of investments mentioned and any income that might accrue could fall, rise, or fluctuate. Foreign currency exchange rates may adversely affect any product's value, price, or revenue.
